

### **ANA MERCEDES CARVALLO, VENEZUELA**

Materials: Silver necklace with nine reversible and exchangeable copper vitreous enamels. Price: € 400

The necklace is made of silver and is on one side soldered to a mechanism that allows the pendant to open and close, so that the enamel pieces can be interchanged. On one side there is a sun with flat silver wires soldered onto it, the other side is open to allow you to view the design as a whole. The enamels are inspired by shapes found in nature and are reversible, just like the centrepiece.
